1. NDIA Assistive Technology & Consumables Code Guide

The *National Disability Insurance Scheme Act 2013* (NDIS Act) states that a funded support must represent “value for money” in that the costs of the support are reasonable, relative to both the benefits achieved and the cost of alternative support.

Determining whether a support is reasonable and necessary for an individual participant will be guided by the *NDIS Act (2013)*, the associated *NDIS Rules*, and the National Disability Insurance Agency’s (NDIA) Operational Guidelines. These can be found on the NDIS website under the “About Us” tab¹. This Guide to Assistive Technology (AT) is not used by the NDIA as part of that reasonable and necessary decision making.

This Guide is not a comprehensive list of all AT supports that may be provided as reasonable and necessary under the NDIS, but lists the most commonly used supports to assist providers to claim payments using a “best-fit” approach, and to assist participants with consistent terminology for AT comparison.

This Guide should be read in conjunction with the NDIS *Terms of Business for Registered Support Providers* (the ‘Terms of Business’)².

Service providers should also make use of the information available in the NDIS provider portal³.

1.1 There are three categories of Support Purpose in the NDIS

The NDIS provides funding to participants to purchase a range of supports aimed at increasing their independence, inclusion, and social and economic participation. This funding model is designed to be flexible and to allow service innovation. Importantly, the supports delivered will be chosen and paid for by individual participants from their approved NDIS plan.

In the NDIS, supports for participants fall into three Support Purpose categories: core, capital and capacity building.

- i. CORE – A support that enables a participant to complete activities of daily living and enables them to work towards their goals and meet their objectives.
- ii. CAPITAL – An investment, such as AT, equipment and home or vehicle modifications, funding for capital costs.
- iii. CAPACITY BUILDING - A support that enables a participant to build their independence and skills.

1.2 NDIS Outcomes Framework: Supports should help participants achieve their goals

The NDIS Outcomes Framework has been developed to measure goal attainment for individual participants and overall performance of the NDIS. There are 8 Outcome Domains ('Domains') in the framework. These Domains help participants to identify their own goals in different areas of their life, and to assist planners to explore where supports in these areas already exist and where further supports are required.

1. Daily Living
2. Home
3. Health and Well-being
4. Lifelong Learning
5. Work
6. Social and Community Participation
7. Relationships
8. Choice and Control

NDIS service providers should be aware that all supports and services for NDIS participants should contribute to the achievement of their own individual goals.

1.3 Support Categories

NDIS supports are arranged into 15 categories that align to their purpose and the NDIA Outcomes Framework (see above).

SUPPORT PURPOSE	OUTCOMES FRAMEWORK DOMAIN	SUPPORT CATEGORY (Plan Budgets)
CORE	Daily Living	1. Assistance with Daily Life
	Daily Living	2. Transport
	Daily Living	3. Consumables
	Social & Community Participation	4. Assistance with Social & Community Participation
CAPITAL	Daily Living	5. Assistive Technology
	Home	6. Home

SUPPORT PURPOSE	OUTCOMES FRAMEWORK DOMAIN	SUPPORT CATEGORY (Plan Budgets)
CAPACITY BUILDING	Choice & Control Home Social and Community Participation Work Relationships Health & Wellbeing Lifelong Learning Choice and Control Daily Living	7. Coordination of Supports 8. Improved Living Arrangements 9. Increased Social and Community Participation 10. Finding and Keeping a Job 11. Improved Relationships 12. Improved Health and Wellbeing 13. Improved Learning 14. Improved Life Choices 15. Improved Daily Living Skills

1.4 There are many support ‘line items’ within Assistive Technology

As previously noted, this Guide is not a comprehensive list of all supports that may be reasonable and necessary for a participant.

As with other support categories, AT has many specific supports and services that are recognised in the NDIS payment system, these are referred to as ‘line items’. A comprehensive listing of AT support line items is kept up to date in a separate file (csv format) on the NDIS website. This file includes item descriptors to assist providers to claim payments using a “best-fit” approach, and to assist participants in negotiating prices for AT and other supports.

Providers should claim payments against a support line item that most closely aligns to the product or service they have delivered.

1.5 Participant budgets are allocated according to Support Purpose

Supports in participant plans are categorised according to the three Support Purposes identified earlier.

Participant budgets for these capital supports, such as AT, are usually restricted to specific items identified in the participant’s plan. Most items are ‘quotable’, which means that providers must negotiate a price in a Service Agreement with a participant and provide a written quote for that supply. Associated supports can include assessments associated with supply of the AT device, as well as delivery, set-up, and adjustment, as well as ongoing maintenance/repair costs.

Typically AT that is more complex requires more detailed assessment and other services, separate from the AT itself.

Assessment, fitting, training, customisation or other intervention by a professional, where required to deliver the correct equipment to meet a participant’s needs are provided under therapeutic supports and are described in the NDIA Price Guide⁴.

Guidance on AT complexity can be found in the [NDIS AT Complexity Level Classification](#) document located on the NDIS website under the Provider tab.

2. Payments and Invoicing in 2016/17

Providers should refer to the NDIS Terms of Business as a starting point for serving NDIS participants. In particular, the Terms of Business specify that providers will charge for supports delivered:

- in accordance with the NDIA pricing arrangements and guidelines, and
- after the support has been provided.

No additional co-payment is to be charged to the participant where an NDIA registered provider is submitting a claim as part of their negotiated Service Agreement with that participant. An exception to this is where there is an express agreement with the participant to purchase AT above the NDIS reasonable and necessary funding available.

2.1 Introduction of new Support Item Reference Numbers

From 1 July 2016, the NDIS payments system adopted a new reference system for supports and services. Unique numbers have been allocated for each support line item. Each number is allocated according to the following structure:

For example:

Mobile shower commode - child transporter (05_091203055_0103_1_2)

Support Category	AS/NZS ISO9999 code	Line item	Provider Registration Group	Domain	Funding Type
05	091203	055	0103	1	2

2.2 Composite Codes

For some areas of AT or home modifications, composite codes were developed, and where a participant’s plan contains a “Composite support code” as listed below in their AT or home modifications budget, a provider will need to claim against that code.

These codes are provided for guidance below.

Code	Description
05_410_0135_1_2	Orthoses – Composite
05_411_0135_1_2	Prostheses Part – Composite
05_412_0135_1_2	Prostheses Full – Composite

05_429_0105_1_2	Pressure care cushion – Composite
05_430_0105_1_2	Minor transfer – Composite

2.3 Service Bookings

From 1 July 2016, the NDIS payment system requires Service Bookings to be created between the participant and their provider. This ensures that both parties are aware of the requirements for service, and that the participant will be able to pay for the service.

2.4 Service providers must offer quotes for AT

Quotes are required from providers for the provision of AT where indicated in this Guide. Participants can then decide whether or not to accept these quotes.

It is important to note that not all quotes will be processed automatically. If the quote received is higher than NDIA thresholds for that support item, specific approval will be required from the NDIA, alternatively the NDIA may offer reasonable and necessary funding based on the best available pricing from the market. The participant is then able to decide whether they wish to proceed with the quote and pay the gap themselves (refer below about co-payments).

Identification of supports in a participant's plan, and approval of quotes, may require an assessment by a suitable AT assessor. Appropriate assessment by a suitable AT assessor is covered in 'Therapy Supports' or 'Custom Prosthetics' categories in the Capacity Building budget area⁴.

2.5 GST

Most items are GST exempt, as per Australian Tax Office information about GST and NDIS and the application of section 38-38 of the *GST Act*. For a small number of items, where GST is applicable (i.e. delivery fees and taxi fares) the price is inclusive of GST. Further information can be obtained from the [ATO website](#).

2.6 Co-Payments

A participant is not required to contribute to the payment of delivery of an AT product that is part of reasonable and necessary supports in a plan. The NDIS will cover the full cost of provision of the support

considered reasonable and necessary. In most cases, a participant is free to choose a more expensive option at their own expense (i.e. where the cost of the additional item exceeds the reasonable and necessary funding level). An example of this situation would be where a home modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not part of the reasonable and necessary support costs. In this situation, the NDIA will cover the reasonable and necessary component of the modification, and the participant will pay the additional costs.

3. Consumables (Support Category 03)

Consumables are a support category available to assist participants with purchasing everyday use items. Supports such as continence and home enteral nutrition (HEN) products are included in this category.

3.1 Continence related equipment

Continence needs should be reassessed at least every three (3) years (or where there have been adverse medical events such as urinary tract infections) to ensure the appropriate continence solutions are being used.

Note: Some children older than 11 or 12 years may need to use adult continence products based on their weight and height.

4. Capital Supports (Assistive Technology – Support Category 05)

This section describes the rules and arrangements that apply to capital supports.

4.1 Assistive products for household tasks

This category includes all aids or equipment supports that assist participants to live independently or assist a carer to support the participant. It also includes related assessment, set-up and training support items performed by assistive technology suppliers. Appropriate assessment and training undertaken by a suitable AT assessor is covered in the 'Therapy supports' or 'Custom Prosthetics' categories in the Capability Building budget area (see general Supports Price Guide).

4.6 Vehicle modifications

Vehicle modifications include the installation of, or changes to, equipment in a vehicle to enable a participant to travel safely as a passenger or to drive.

A participant is free to choose a more expensive option at their own expense, where the more expensive option is not considered to be reasonable and necessary. An example of this situation would be where a vehicle modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not reasonable and necessary. In this situation, the NDIA will cover the reasonable and necessary component of the modification, and the participant will pay the additional cost (gap).

4.7 Assistive equipment for recreation

In line with the Operational Guidelines, recreational equipment is not funded ordinarily or in total. The NDIA is currently reviewing its approach to recreational equipment.

Where a piece of general equipment needs modifying, such as a tricycle for a person with balance or other motor/sensory impairments, the additional cost of the modification related to disability may be fundable. The increment over and above the cost of the general equipment may be deemed reasonable and necessary if this links to a plan goal.

The support items below incorporates aids and equipment to assist participants in undertaking competitive and non-competitive sports and other recreational pursuits.

5. Home (Support Category 06)

This category includes home modifications and Specialist Disability Accommodation (SDA) supports. This guide does not include the support items for SDA or complex home modification, these can be found in the relevant state/jurisdiction price guides. Complex home modifications apply where there is a structural modification to a dwelling or when a local authority permit is required, and should be referred to the NDIA for advice in the first instance.

5.1 Home modifications support

Home modifications covered in the Guide includes design and construction, as well as installation of equipment or changes to non-structural components of the building and installation of fixtures or fittings to enable participants to live as independently as possible or to live safely at home.

All items are quotable.

Quotes will be requested and accepted for modifications that are reasonable and necessary for the participant. A participant is free to choose a more expensive option at their own expense, where the more expensive option is not reasonable and necessary. For example, where a home modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not reasonable and necessary, the NDIA will cover the reasonable and necessary component of the modification, and the participant will pay the extra costs.

5.1.1 Home modifications

This area incorporates design and subsequent changes to the participant's home. Home modification design and construction includes installation of equipment or changes to building structures, fixture or fittings to enable participants to live as independently as possible or to live safely at home.
